Understanding Statistical Geography

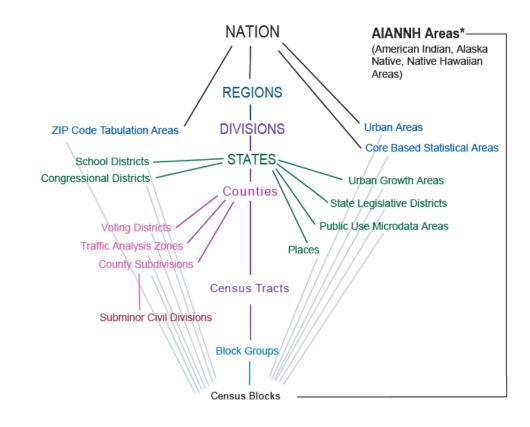

Jim Castagneri Lacey Loftin

Overview of Census Geography

Two main types of Census geography:

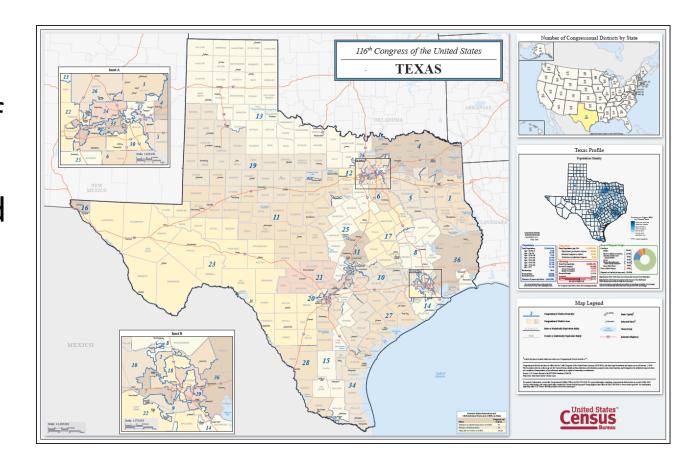

- Legal or Administrative
- Statistical

Basics of Legal or Administrative Geography

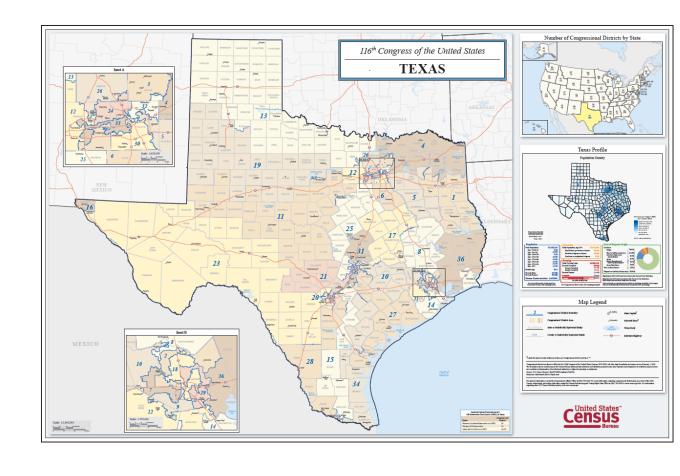

- Have a Highest Elected Officials
- Boundaries change at the will of the governing body
- New geographies can be formed by a new incorporation

Examples of Legal or Administrative Geography

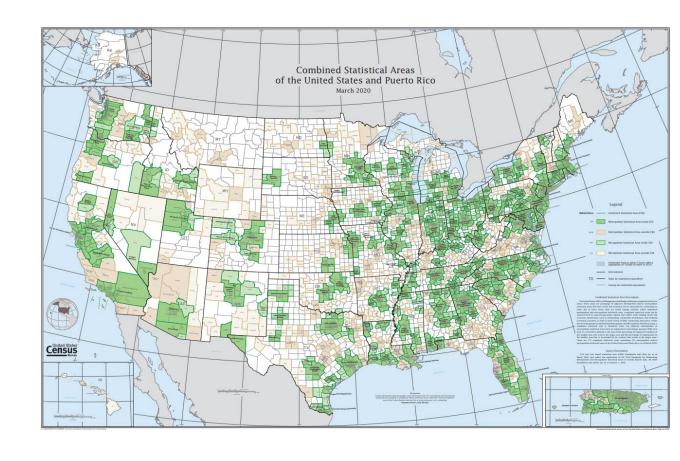

- States
- American Indian Reservations
- Counties
- Places
- Congressional Districts
- School Districts
- Voting Districts

Basics of Statistical Geography

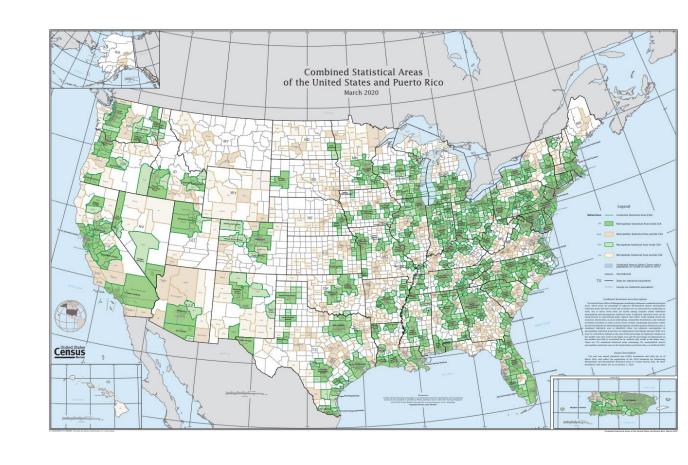

- No gaps and no overlaps
- Boundaries are created and maintained by the U.S. Census Bureau
- Are created and updated only for statistical purposes
- The U.S. Census Bureau is the geographical data steward for the U.S. Government

Examples of Statistical Geography

- State
- County
- Census Tract
- Census Block Group
- Census Block
- Census Designated Places (CDPs)
- Census County Divisions

Tribal Statistical Geographies

- Tribal Census Tracts (TCTs).
- Tribal block groups (TBGs).
- Census Designated Places (CDPs).
- Tribal Designated Statistical Areas (TDSAs).
- State Designated Tribal Statistical Areas (SDTSAs).
- Oklahoma Tribal Statistical Areas (OTSAs).
- Statistical tribal subdivisions.

Census Designated Places

Statistical area	Primary purpose	Nationwide wall-to-wall coverage	Geography nests within	2020 Census population criteria	2020 Census housing unit criteria
Census designated places (CDPs)	Place-level statistics for well-known, closely settled named localities that are not part of an incorporated place. Mix of residential and commercial areas.	No, CDPs capture distinct communities.	State	Should have population during at least one entire season (at least 3 consecutive months) of the year.	Should have higher housing unit (or population) density than surrounding area. If less than 10 housing units, Census Bureau will ask for an explanation.

Census County Divisions

Statistical area	Primary purpose	Nationwide wall-to-wall coverage	Geography nests within	2020 Census population criteria	2020 Census housing unit criteria
Census county divisions (CCDs)	Provide data for sub- county units that have stable boundaries and recognizable names. Usually represents one or more communities, economic centers, or major land uses.	Partial— CCDs and minor civil divisions (MCDs) together pro- vide national coverage. CCDs exist in 21 states. ²	County	None	None

Census Tracts

Statistical area	Primary purpose	Nationwide wall-to-wall coverage	Geography nests within	2020 Census population criteria	2020 Census housing unit criteria	
CENSUS TRACTS						
Standard census tract	Boundary continuity. Data comparability.	Yes	County	Optimum: 4,000 Minimum: 1,200 Maximum: 8,000	Optimum: 1,600 Minimum: 480 Maximum: 3,200	
Special use	Distinguish areas of little or no population that have a specific type of land use. Large water bodies.	No	County	Population Threshold = Little/None or must be within the standard census tract threshold. Area Measurement Thresholds: Within Urban Area = 1 sq. mile Outside Urban Area = 10 sq. miles. Inland water body = 100 sq. miles. Water body not coextensive with a water only census tract = none.		

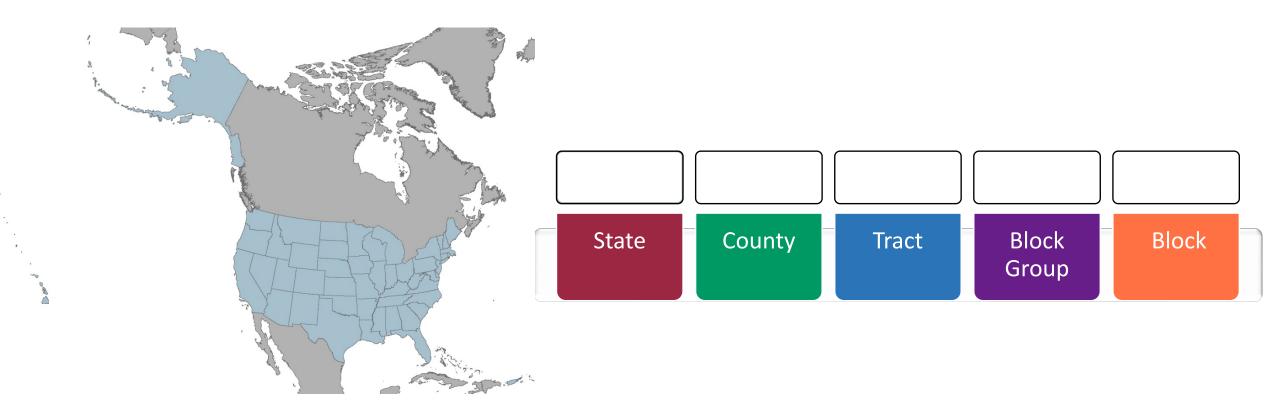

Block Groups

Statistical area	Primary purpose	Nationwide wall-to-wall coverage	Geography nests within	2020 Census population criteria	2020 Census housing unit criteria	
BLOCK GROUPS						
Standard block group	Form the geographic framework within which census blocks are numbered. Smallest area for which demographic characteristics are produced from the American Community Survey (ACS).	Yes	Census Tract	Minimum: 600 Maximum: 3,000	Minimum: 240 Maximum: 1,200

Tracts over Time

- First used in the 1910 census in some urban areas
- Full coverage in 1990
- Population Growth can require tract splits
- Maintain Comparability
 - Numbering
